

MOHAMED SAEED ALI

Back End Java Developer

📞 01044162379 @ mohamed12993@hotmail.com 🔗 <https://www.linkedin.com/in/mohamed-saeed-2343ba318/>

SUMMARY

I am a Junior Back End Java Developer with expertise in designing and implementing scalable web applications. My skills include Java, Spring framework, and Hibernate, with a strong focus on creating RESTful APIs. I have experience in database design and optimization, and I am dedicated to ensuring performance and security in all projects I undertake.

EXPERIENCE

Trainee Back End Java Developer

NTG Egypt

📅 07/2024 - 09/2024

A training position focusing on backend development and API integration

- Collaborated with frontend teams to integrate over 15 RESTful APIs, improving data exchange and application stability.
- Trained on backend development best practices, team collaboration, and integrating RESTful APIs with relational databases.

EDUCATION

Information Technology

Taiba Academy for Information Technology

📅 10/2021 - 07/2025

KEY ACHIEVEMENTS

🏆 Back-End Development

Successfully built multiple backend systems including TibaCare, Army Management System, and an E-Commerce backend with strong emphasis on performance and security

LANGUAGES

English

Advanced

SKILLS

Java	PostgreSQL	MySQL
Hibernate	Spring Security	JWT
Spring Data JPA	Postman	Docker
Git	Maven	RESTful APIs
Spring Boot		

PROJECTS

TibaCare

TibaCare – Healthcare Management System focused on backend development

- Improved a backend healthcare management system using Java and Spring Boot.
- Executed modules for staff and department management.
- Planned and managed entity relationships between staff and departments.
- Built RESTful APIs to manage healthcare system data across multiple healthcare modules.
- Employed global exception handling and clean architecture principles.

Army Management System

Army Management System developed to manage personnel data

- Expanded a RESTful backend system using Java & Spring Boot to manage personnel data and roles
- Enforced CRUD operations with Spring Data JPA and MySQL
- Created entity relationships (One-to-Many, Many-to-One)
- Utilized DTOs and exception handling for clean API responses.
- Secured endpoints using Spring Security and JWT

PROJECTS

E-Commerce Backend System

E-Commerce Backend System designed for a functional e-commerce application

- Built a complete E-Commerce backend using Spring Boot
- Enforced User, Product, Category, Cart, and Order modules
- Enhanced authentication and authorization using JWT
- Managed product categories and inventory with relational database design
- Applied global exception handling and validation

Break Time Management System

Break Time Management System aimed at managing employee break schedules

- Developed a backend system to manage break times and schedules
- Implemented CRUD operations using Java and Spring Boot
- Designed database tables and entity relationships using JPA
- Built RESTful APIs for managing breaks and users
